DEAN SULLIVAN

Grantville Commercial Sands Plant Upgrade

PANEL BUILD & INSTALL

Dandy Premix Quarries Pty Ltd (Grantville Commercial Sands) enlisted the services of Marcus Cranny from Positive Electrics together with Middy's Industrial Business Development Manager (BDM) Dean Sullivan and the Middy's Carrum Downs team to help upgrade their plant in Grantville Victoria.

With the need to upgrade and expand the sand plant, the project took several years from concept to completion securing the supply of sand for the next decade.

The project consisted of components including, fabricated enclosures, Schneider VSDs, PLC, Contactors and Overloads as well as Cable Trays & Cable.

Upgrading of the plant was a priority to ensure the longevity of the business. The Positive team did a great job building the panels along with David from Beavis Electrical looking after the engineering of the process. Middy's assisted with their knowledge and expertise in managing the complexity of the project, ensuring timelines were met along the way with the Carrum Downs Branch staff and Industrial BDM, Dean Sullivan offering ongoing support throughout.

With the complexity of this project and timelines needing to be met, along with the ongoing support from the Middy's Carrum Downs Branch staff and Industrial BDM Dean Sullivan, this project only highlights that Middy's Electrical was the best choice.

- Marcus Cranny, Positive Electrics

THE INSTALL:

- ▶ Fabricated Enclosures
- ▶ Schneider VSDs, PLCs, Contactors & Overloads
- ▶ Cable Trays & Cables
- ▶ Engineering & Commissioning

PROJECT OUTCOME:
INCREASED LONGEVITY
OF THE BUSINESS
